General process (today):

PRESENT FOR SAFETY
COMMITTEE

General process (today):

Some considerations

- The framework for safety approvals could change
 - It is expected that the license, and thus the responsibility, for the nuclear installations will be transferred to NND in a foreseeable future
 - The safety reports will eventually be replaced by a “final decommissioning plan”
- The safety aspects should be addressed early in the projects
 - Seek advice from safety staff/site manager
 - Try to identify potential new risks currently not evaluated in the safety reports or associated procedures
- But: Innovative solutions could offer great safety benefits in supporting decommissioning!
