

# Decommissioning information management at IFE

Jan Erik Farbrot  
farbrot@ife.no

# Information management

Have the correct information available when needed, adapted to the task at hand

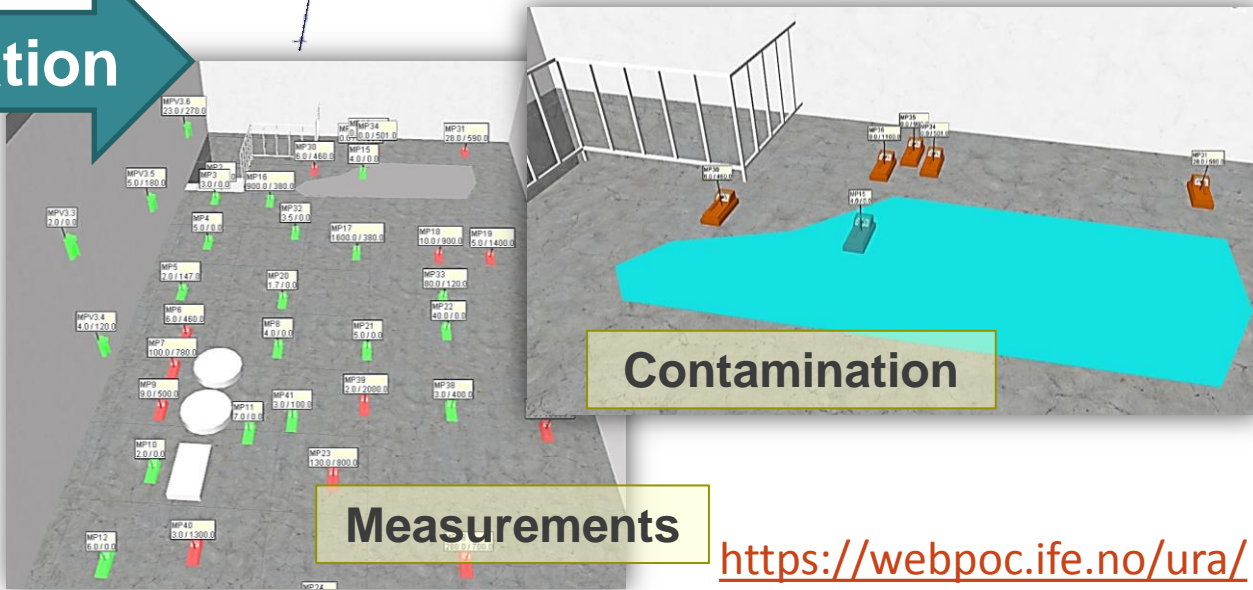

Common front-end information solution

# Example: Uranium Reprocessing Facility

Digitalization

<https://webpoc.ife.no/ura/>

Documents

Notes  
(e.g. warnings)

## Present situation

- What is the problem/issue – the new mission?
- What is the consequence of the problem?
- How is it done by others with similar missions?
- What is new, and what will be continued?
- Why is it important to address this?

## A3 process

## Wanted situation

- Which goals do we want to achieve?
- How do we measure this?
- What does the ideal situation look like?
- Which criteria should be fulfilled for the problem to be solved?

## Analysis of the present situation

- Which underlying things are causing the problems?
- What are the key challenges – and why?
- What needs to be improved?

## Measures and follow-up

- Which possible solutions are available?
- Which measures will lead us to the goal? Prioritisation
- Who should do what, and when?
- How to secure follow up?

# IDENTIFY & PRIORITISE CASES

## Present situation

- What is the problem/issue – the new mission?
- What is the consequence of the problem?
- How is it done by others with similar missions?
- What is new, and what will be continued?
- Why is it important to address this?

### MAPPING THE CASE

- Governing documents
- International experience
- Work process(es)
- Competence
- Systems/tools/information

## Analysis of the present situation

- Which underlying things are causing the problems?
- What are the key challenges – and why?
- What needs to be improved?

### ANALYSIS OF THE CASE

- Causes and contexts
- Weak/strong points
- Stakeholders

2

## Decom case process

3

### Prepare decom case session

Goal and focus  
Participants  
Case description (one-page)  
“Props”: Tools, mock-ups etc.

Invite participants

4

### Decom case session

- Stage situations
  - “Act / play roles”
- Findings
  - People, governance, organisation/process, technology - capabilities
- Identify needs for additional iterations

Iterations

Decision basis

COMMON (FRONT-END) INFORMATION SOLUTION

## Wanted situation

- Which goals do we want to achieve?
- How do we measure this?
- What does the ideal situation look like?
- Which criteria should be fulfilled for the problem to be solved?

## Measures and follow-up

- Which possible solutions are available?
- Which measures will lead us to the goal? Prioritisation
- Who should do what, and when?
- How to secure follow up?

### RECOMMENDATIONS & MEASURES

- Capabilities
- Measures
- Plan for follow-up & measure of effect

### MEASURING THE EFFECT

# Potential outcome?

- Before and during decommissioning, the system will provide a clear overview and support in planning. Furthermore, being kept updated, anybody can view the planned activities, current status, etc., improving safety and efficiency.
- A 3D-based system may give a very clear, strong overview of current status etc., which in turn may help ensure nothing is missed or forgotten (“Why is that wall blank, are there no measurements?”)
