ProcSee, List of Issues

Known issues for the latest released ProcSee version (3.10.6)

Issue #	Description	Affected platforms	Suggested workaround	Target version
1302	The circular gradient is not positioned at the correct spot when used with a circle shape	Windows	None	Not specified
1276	PfAddField fails if the field itself is a struct	All	Use PfReadScript	Not specified
1274	In pdat files, missing semicolons after string initialization statements will cause the parser to fail and crash the RTM and user application.	All	None	Not specified
1256	Leakage of user handles identified for some .NET controls when used in the RTM	Windows	None	Not specified
1242	During resizing of an exported window, RTM draws the content incorrectly if window is panned. Content is drawn correctly when resizing ends.	All	None	Not specified
1240	Struct default values not used by pTALK function *newArray*	All	Set values specifically	Not specified
1121	GED's Selected Properties dialogue may fail to show list of attributes or functions	Window	Resize the dialogue	Not specified
1038	Incorrect default colours for ComShapes	Windows	Set colours explicitly	Not specified
961	Strange behaviour when using dynamics on window x/y attributes	Linux/Unix	Use move function	Not specified
930	GED's Graphics Attributes window is not updated to reflect changes to the currently selected shape, unless shape is re-selected	All	Re-select the shape	Not specified
874	Removing and re-creating ProcSee Controls objects in a picture numerous times may lead to errors	Windows	None	Not specified
830	GED's process editor might incorrectly identify errors in pdat files for initialisation of char arrays	Windows	Modify the application's Tdoc file to load the pdat	Not specified
746	Using pTALK functions or attributes to scale, zoom or pan a picture which is displayed in an exported window will set the window's width and height attibutes to incorrect values.	All	None	Not specified
686	pTALK function *windowAt* fails if an ActiveX component is located at the spesified position	Windows	None	Not specified
638	Subwindows incorrectly located if parent window is panned	All	None	Not specified
634	Utility program *pdattoapi* fails to recognise the complete set of reserved words in C#	Windows	Avoid reserved words	Not specified
629	Dynamic connection to variables may be lost in undo/redo sequences	All	None	Not specified
625	Casting to Function* fails	All	None	Not specified
604	Dialogue triggers *pictureDisplayed* and *pictureUndisplayed* are triggered inconsistently	All	None	Not specified
594	Error messages when loading failing COM elements is not informative	All	None	Not specified
593	Loading files containing COM elements fails on non-Windows platforms	Unix/Linux	Remove COM elements in Tdoc and recompile	Not specified
571	RTM may crash during shutdown	All	None	Not specified
567	Window moves when scaled by pTALK function *Window::adjustVirtualDisplay*	Linux/Unix	None	Not specified

565	Performance problem when requesting too much data for an event plot when the timespan is large	All	None	Not specified
543	Rotated instances incorrectly positioned if reference point dynamically equals instance's position	All	None	Not specified
533	Text shifts sideways by a few pixels when made transparent	Windows	None	Not specified
532	In the graphics editor, when a picture is scrolled, it might not update correctly	Windows	Switch to test-mode, then back to edit-mode	Not specified
527	Text with courier font disappears for transparent text	Windows	None	Not specified
497	Windows created by pTALK function *newWindow* doesn't appear in GED's tree-structure	Windows	None	Not specified
479	Dialogue triggers *shapeEntered* and *shapeLeft* may be invoked twice if two shapes are located at exactly the same coordinates and the topmost shape is not filled	All	If possible, avoid any of the two criteria	Not specified
472	Undo/Redo operations after removal of a class does not correctly invoke instances' constructors/destructors	All	None	Not specified
455	No warning if data type of variable referred to by trendlogger's *timeMaster* attribute is not integer	All	None	Not specified
452	RTM crash observed when copying shapes from a picture in one application to a picture in another application	Windows	Copy by copying picture file or Tdoc file contents instead of using GED	Not specified
425	Picture's *resizeMode* attribute does not work correctly for negative scaling factors	All	None	Not specified
414	Images with alpha channel displayed with pink outline	All	None	Not specified
407	Coordinates of polygons and lines may be incorrectly set when the shape is copied	All	None	Not specified
381	In some cases the pTALK compiler does not properly inform about line number of failing code	All	None	Not specified
309	Incorrect handling of visibility attribute in expressions like *visibility = ´aPointer´*	All	Use *visibility = ´aPointer != 0´*	Not specified
131	Incorrect handling of rotated circle archs by pTALK function *exportPostscript*	All	None	Not specified
128	OPC configuration tool may fail to identify incorrect item ids, leading to incorrect .popc files	Windows	Correct the item ids manually based on RTM's error messages	Not specified
125	Length of value for GED's *-gedName* option is maximum 12 characters	All	None	Not specified
70	RTM fails to create image, EMF-file or postscript file for picture if picture hasn't been displayed	All	None	Not specified

ProcSee, List of Issues

Recently fixed issues

Issue #	Description	Affected platforms	Suggested workaround	Fixed version
1550	Too many events make event logs crash	All	None	3.10.6
1476	Dynamics with gradient function gives error message	All	None	3.10.6
1475	Dynamic expressions assigning an array to a pointer fails to compile. Error introduced in 3.10.5.	All	Assign address of first element	3.10.6
1460	Some changes doesn't trigger GED's visualization of save-is-needed	Windows	None	3.10.6
1440	RTM crash when pTALK Text::edit called before picture displayed	All	None	3.10.6
1421	pTALK TimerInterval objects does not stop when period expires	All	None	3.10.5
1419	Drag-and-drop onto TrendShapes doesn't work	All	None	3.10.5
1410	In odd cases, RTM might load an instance with incorrect class	All	None	3.10.5
1392	Illegal initialisation values for string variables in pdat files lead to RTM and/or external application crash	All	Correct the illegal value	3.10.5
1386	pTALK function hasValueChanged returned true if an identical value was assigned	All	None	3.10.5
1209	Timers fail if function pointer argument involves an anonymous instance	All	Set an instance name	3.10.5
1358	In case of a graceful RTM shutdown, ongoing synchronous API functions wait for timeout before terminating	All	None	3.10.4
1353	With slow network connections, API connect handler might re-invoke	All	None	3.10.4
1345	RTM might crash if local char* variable is assigned 0 after having another value	All	None	3.10.4
1337	Incorrect result from pTALK function *buttonIsDown* for right mouse button when used in dialogues triggered by *windowEntered*	Windows	None	3.10.4
1337	Unnecessary reverse IP lookup if IP address is provided instead of hostname	All	None	3.10.4
1327	Trend attribute *verticalPadding* documented in incorrect order	All	None	3.10.4
1319	Error messages from pTALK function *getDependencies* if something depends on TrendLog attributes	All	None	3.10.4
