2nd International Conference on Digital Sovereignty

As digital infrastructure and data become central to how our societies function, the question of who controls them has never been more important. With growing geopolitical tensions and heavy reliance on non-European tech providers, Europe is stepping up, pushing for digital sovereignty through bold regulation and forward-thinking innovation.

This shift is driving new technologies: secure data spaces, autonomous cloud services, distributed identity systems, and interoperable digital infrastructures, especially across the public sector.

Join experts from industry, academia and the public sector to explore the multifaceted aspects of digital sovereignty and its implications for infrastructure, governance, and innovation.

**Venue:
Oslo, Norway,
Forskningsparken
Gaustadalléen 21**

Pre-conference training
October 27 –28. 2025

Industry day
October 29. 2025
